# The improved Bereila Sauce Bar

*The quality of the original*

**The original Bereila Sauce Bar has been one of the most widely used systems for portioning hot and cold sauces for many years. They are very commonly seen in Dutch cafeterias, but also in restaurants, company canteens and many other locations.**

Following the addition of the NEOdis dispenser to the heated Bereila Sauce Bar, the bain-marie system has now been thoroughly improved as well. With the passage of time and the development of new technologies, the Sauce Bar will from now on be equipped with an electronic temperature control system.

The new digital control unit makes it possible to control the temperature of the bain-marie system even more accurately. The temperature is adjustable within a range of 30-90 degrees. In conjunction with the unique black containers, perfect temperature control ensures that your sauces keep their flavour and do not cake. With its contemporary looks, the Sauce Bar is as easy to operate as ever.
